

Amendments to the Specification:

Please replace the paragraph beginning on Page 5, line 4, with the following rewritten paragraph:

--A printer 1110 has three or more media input bins 1010, 1012, and 1014. One of the input bins holds the media on which a multipage document is printed, such as white bond paper. The other bins hold other media stock such as tab stock or other stock. Rollers 1011, 1013, and 1015 are moveable into and out of contact with the top of the stacks of media for withdrawing the media from the bins and placing the media on a conveyor 1020. The printer 1110 receives the media from the conveyor 1020 and prints the desired text onto the media. After printing, the printed media is placed on a discharge conveyor 1021 for travel to one or more discharge bins 1025, 1026. Gates ~~[[1021]]~~ 1022 and ~~[[1023]]~~ 1024 are operable to send the media into one or the other bins.--
